From catch to cultivation.

A$3.72 billion
Total fisheries and aquaculture production value

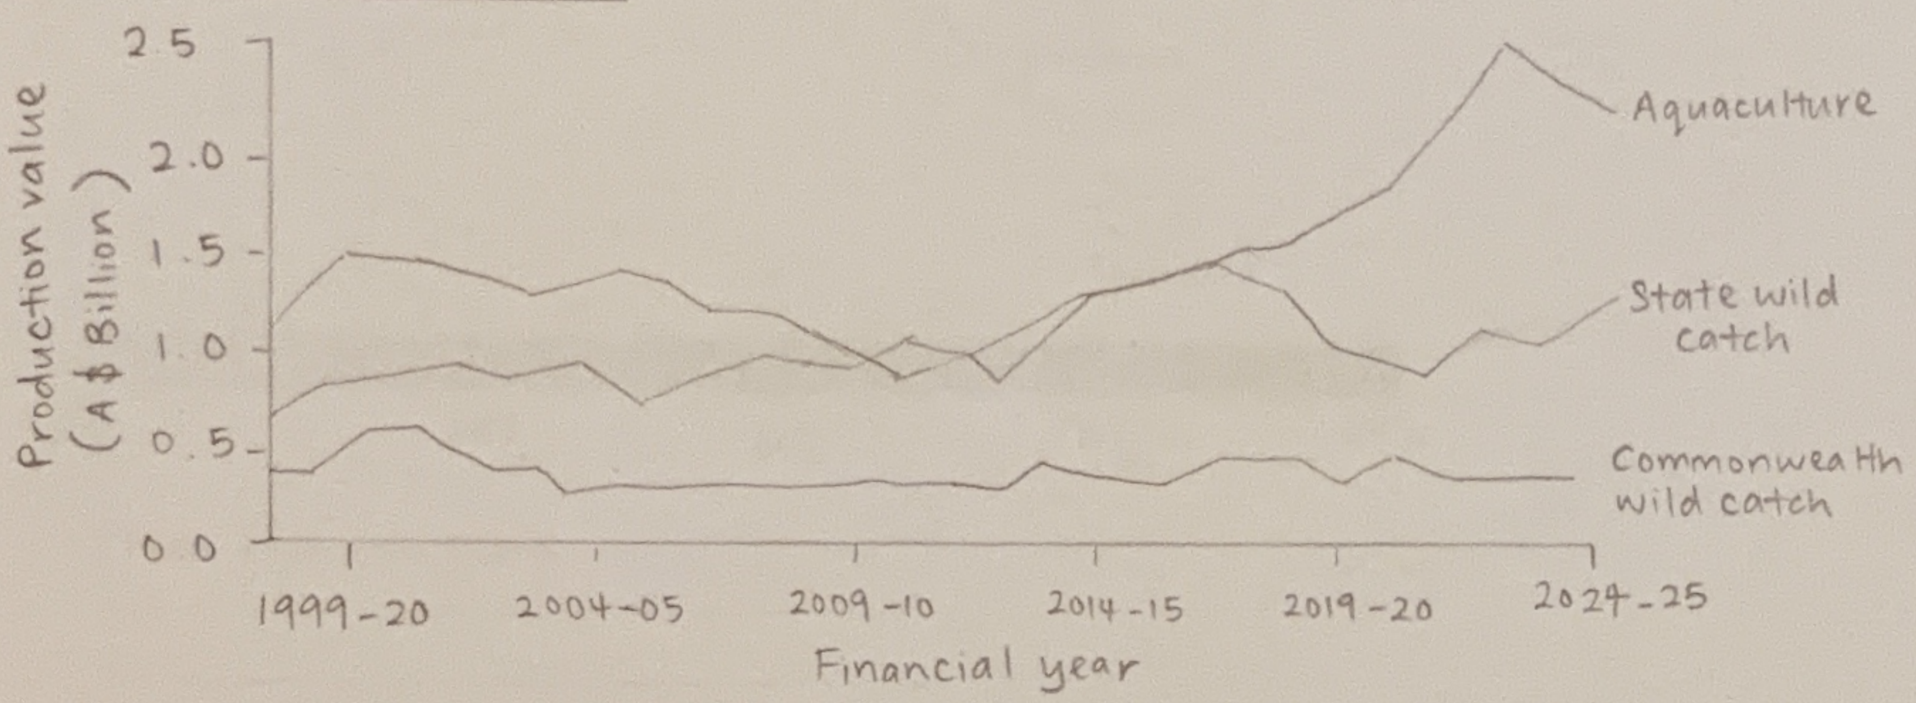
A$ 2.10 billion
Aquaculture value

+A$0.85 billion
Lead over state wild catch

Aquaculture takes the lead

A growing divide in production value

(multi-line chart)



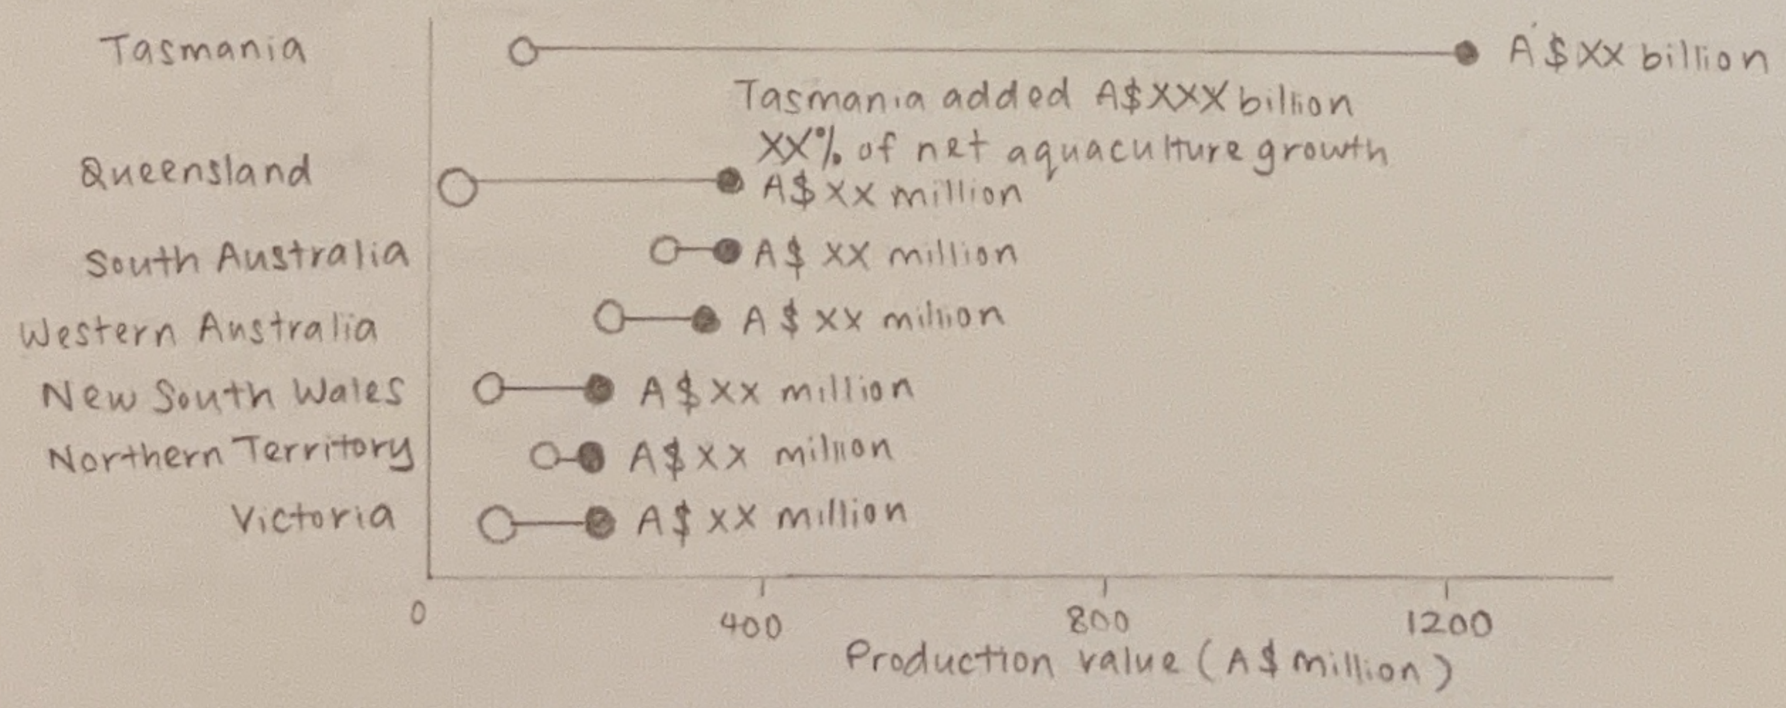
Tasmania drove the aquaculture boom

Aquaculture value by state and territory, 1998-99 vs 2024-25

o 1998-99 • 2024-25

Hover for exact values.

(connected dot plot)



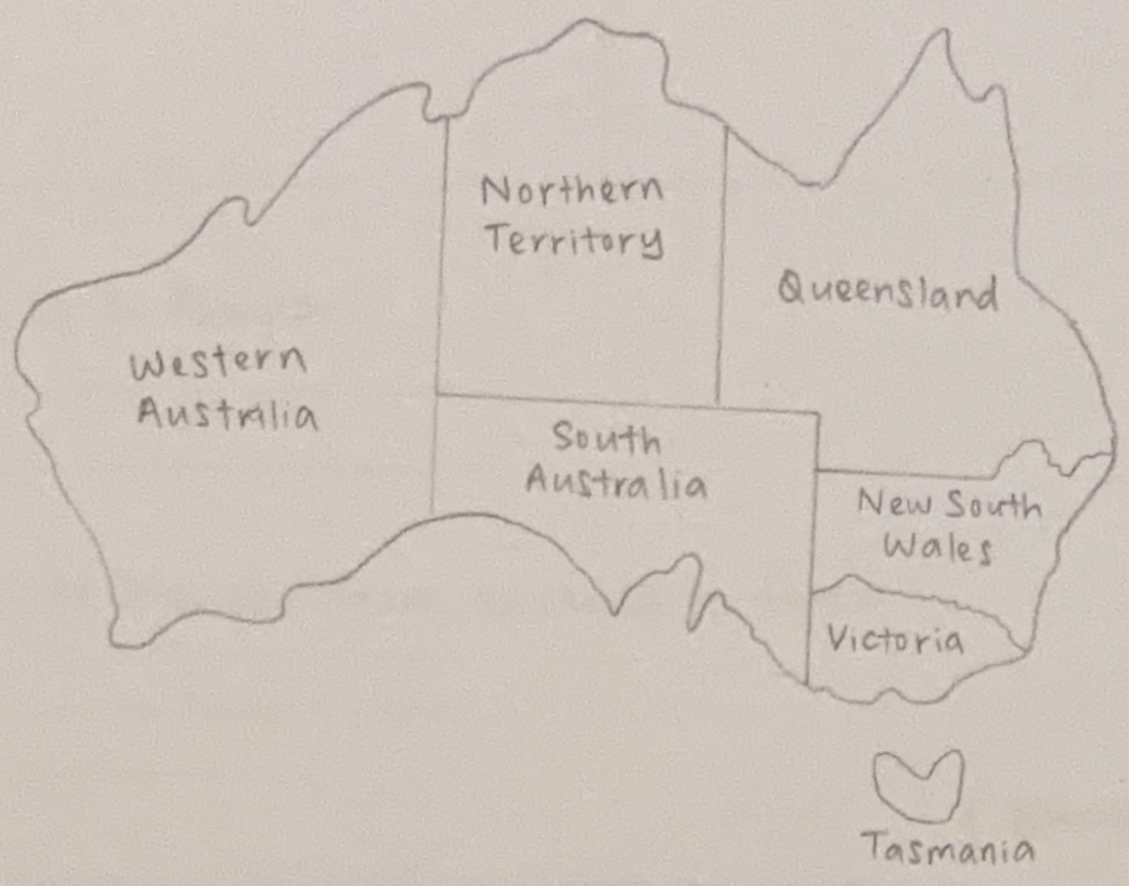
Australia's fisheries economy varies from place to place

Aquaculture dependence varies across Australia

Financial year 1998-99 ——— 2024-25

Highest aquaculture share: XX%

(choropleth map)



0% 25% 50% 75% 100%

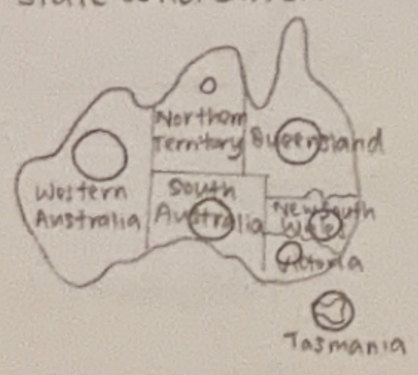
From Share to scale

where fisheries production value is concentrated

(proportional symbol map)

Aquaculture

State Wild catch



Total State-Managed

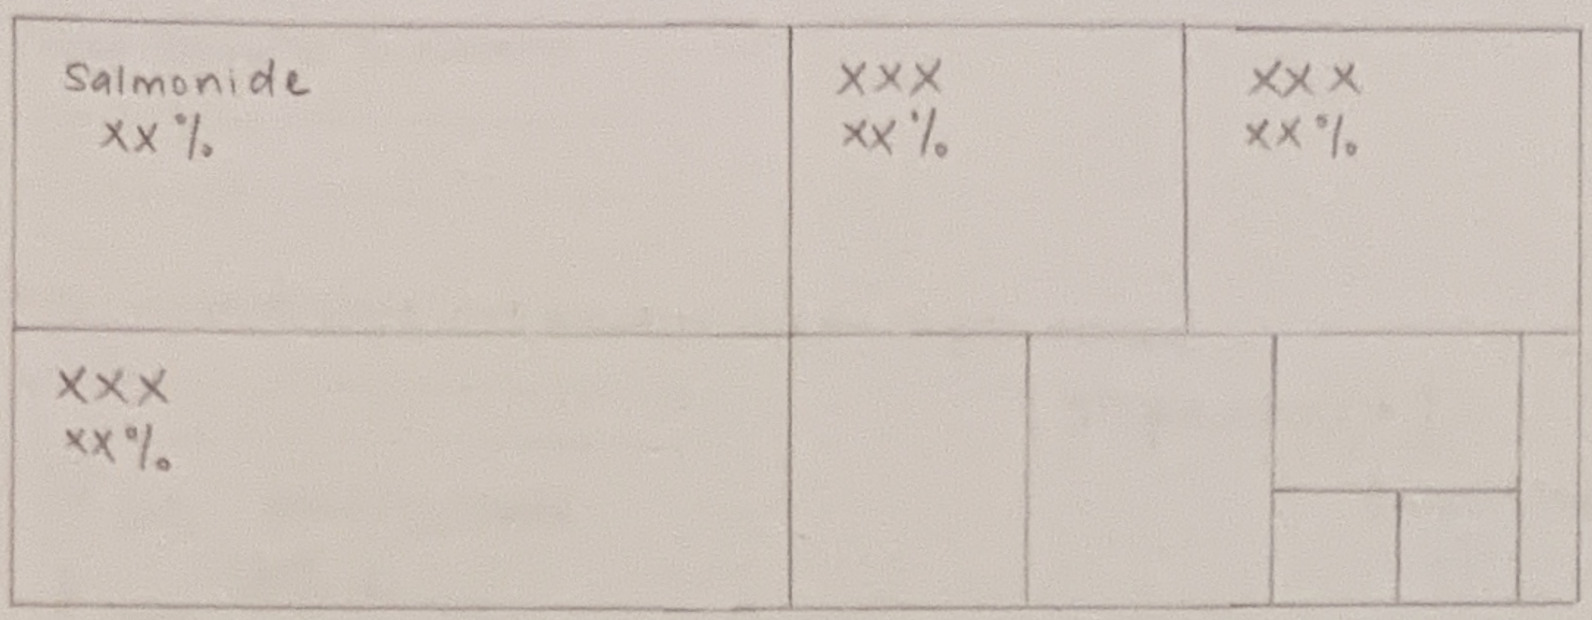
Production Value (A$million)

100 500 1,400

A handful of commodities shape Australia's fisheries economy

Production value by commodities, 2024-25

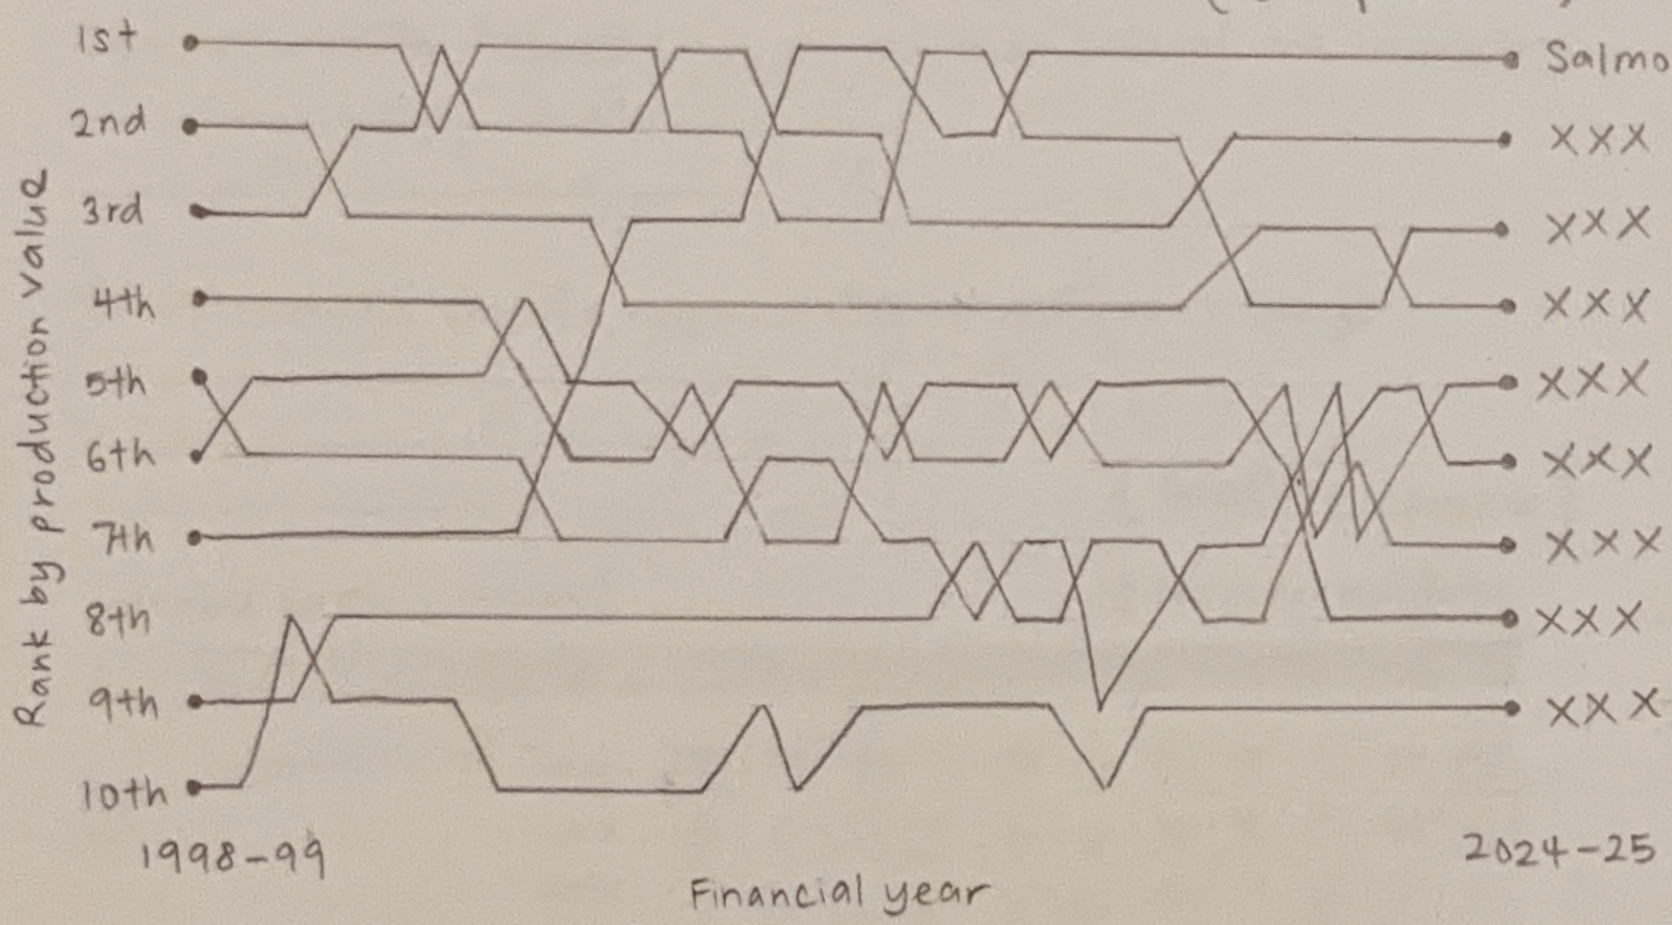
(treemap)



From Size To Position

Salmonide climbed from seventh to first

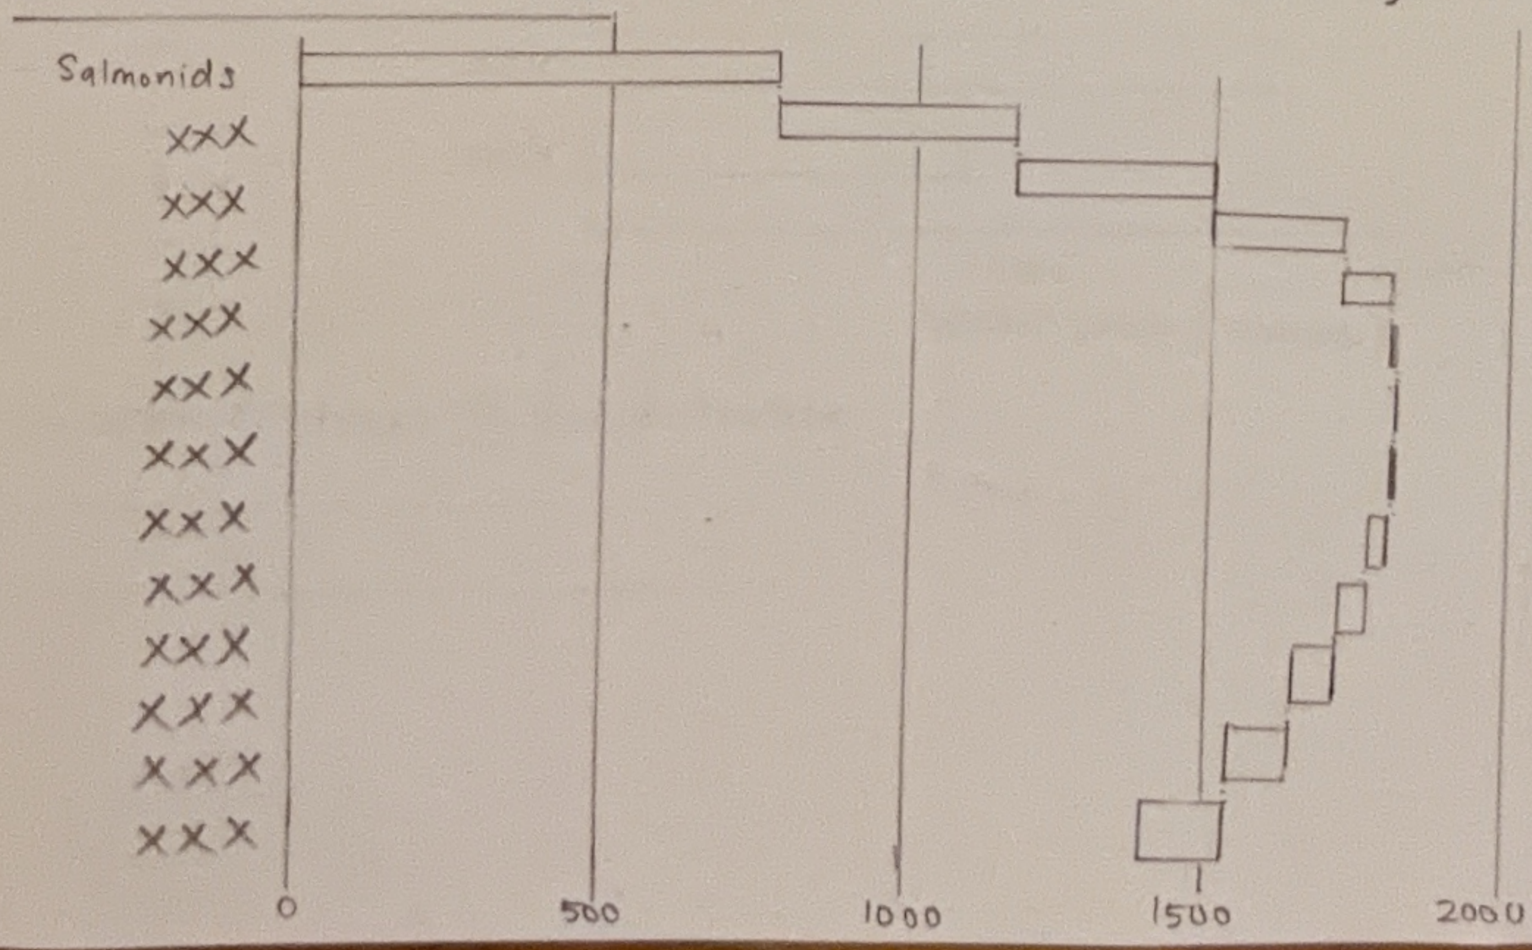
(Bump chart)



From Position To Distribution

Salmonids drove nearly three-quarters of the net increase

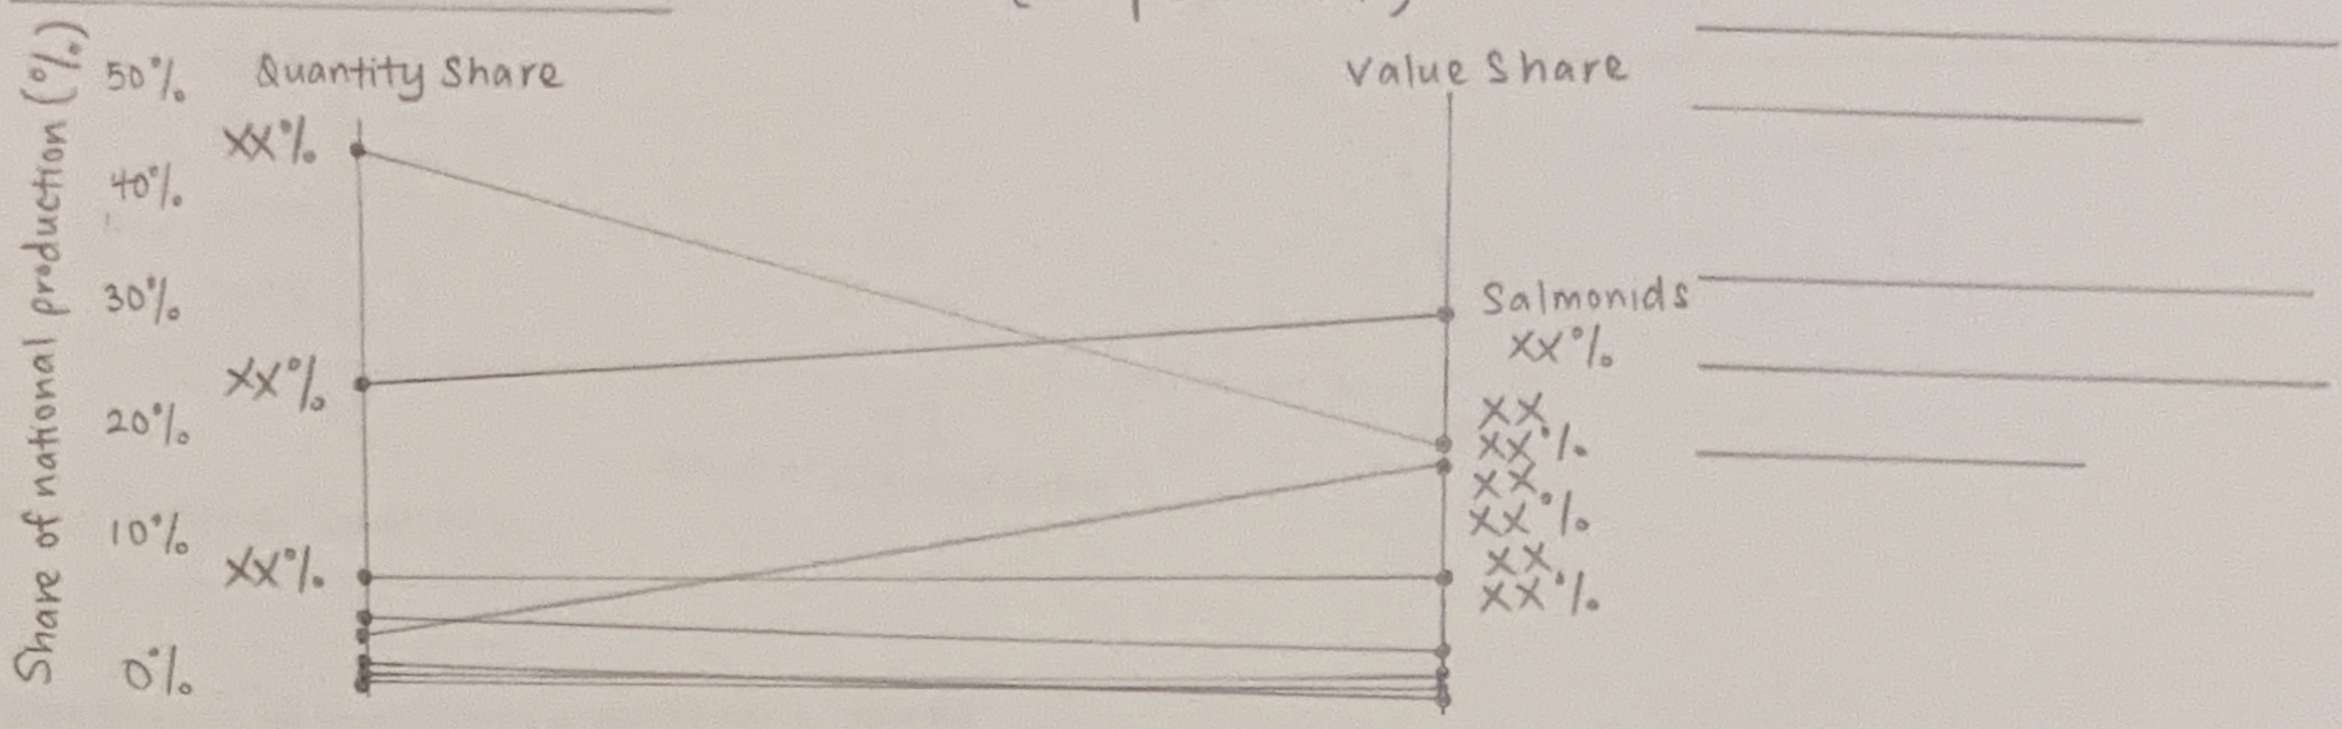
(Waterfall chart)



From Growth To Return

High volume does not always mean high value

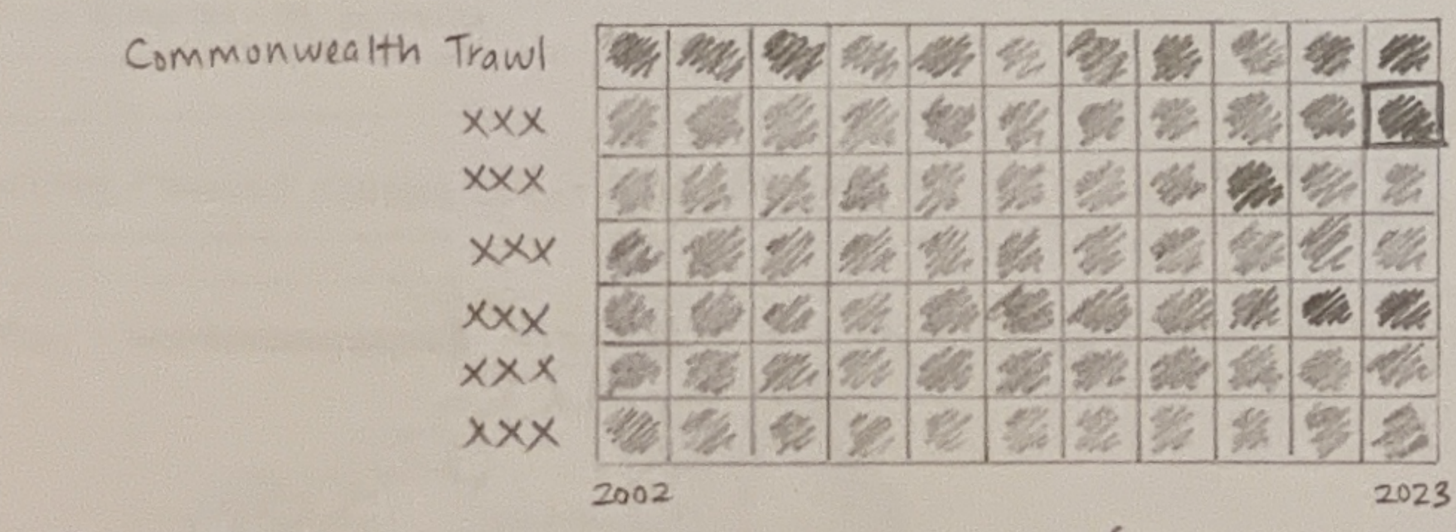
(slope chart)



Commonwealth fisheries reveal another side of the industriy

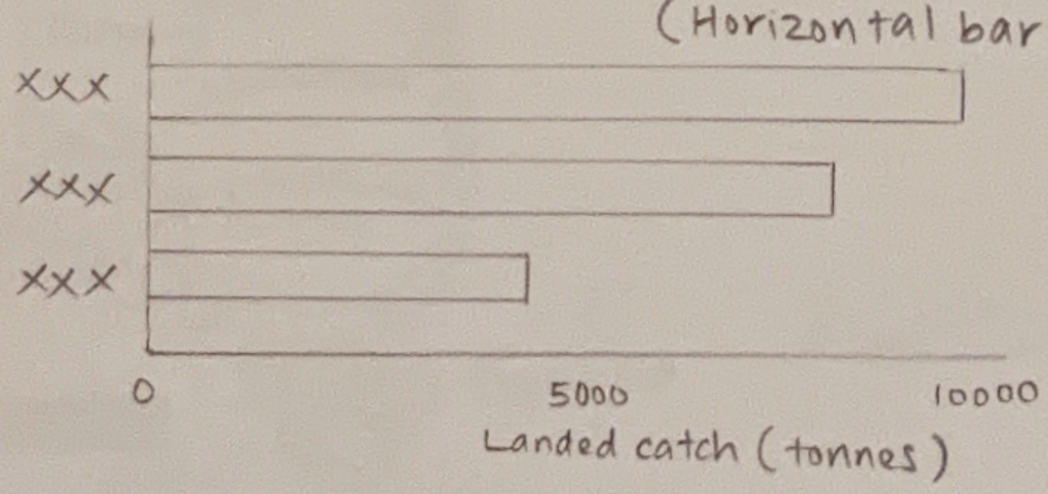
Commonwealth catches rise and fall in different ways

(waffle chart)



Top six species

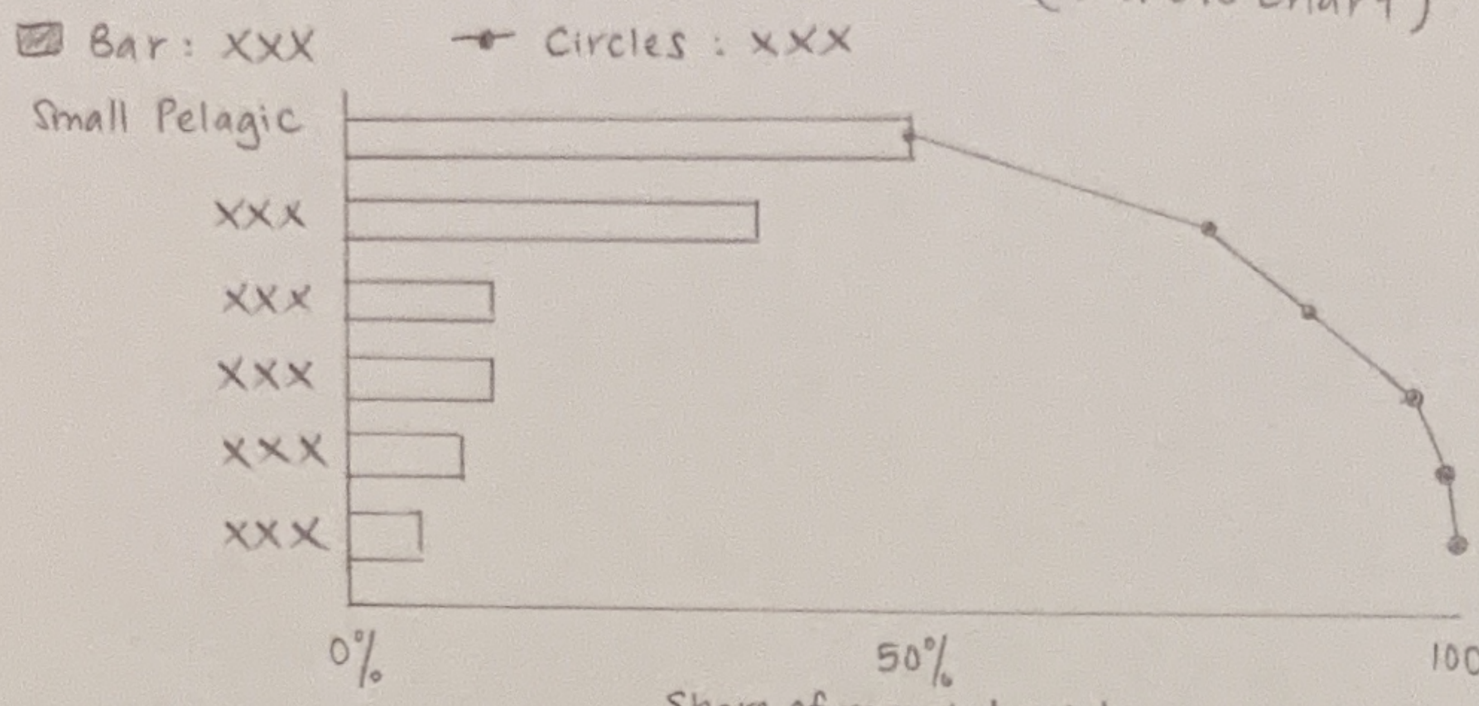
(Horizontal bar chart)



From catch Partners to Concentration

Two fisheries supplied over three-quarters of reported catch

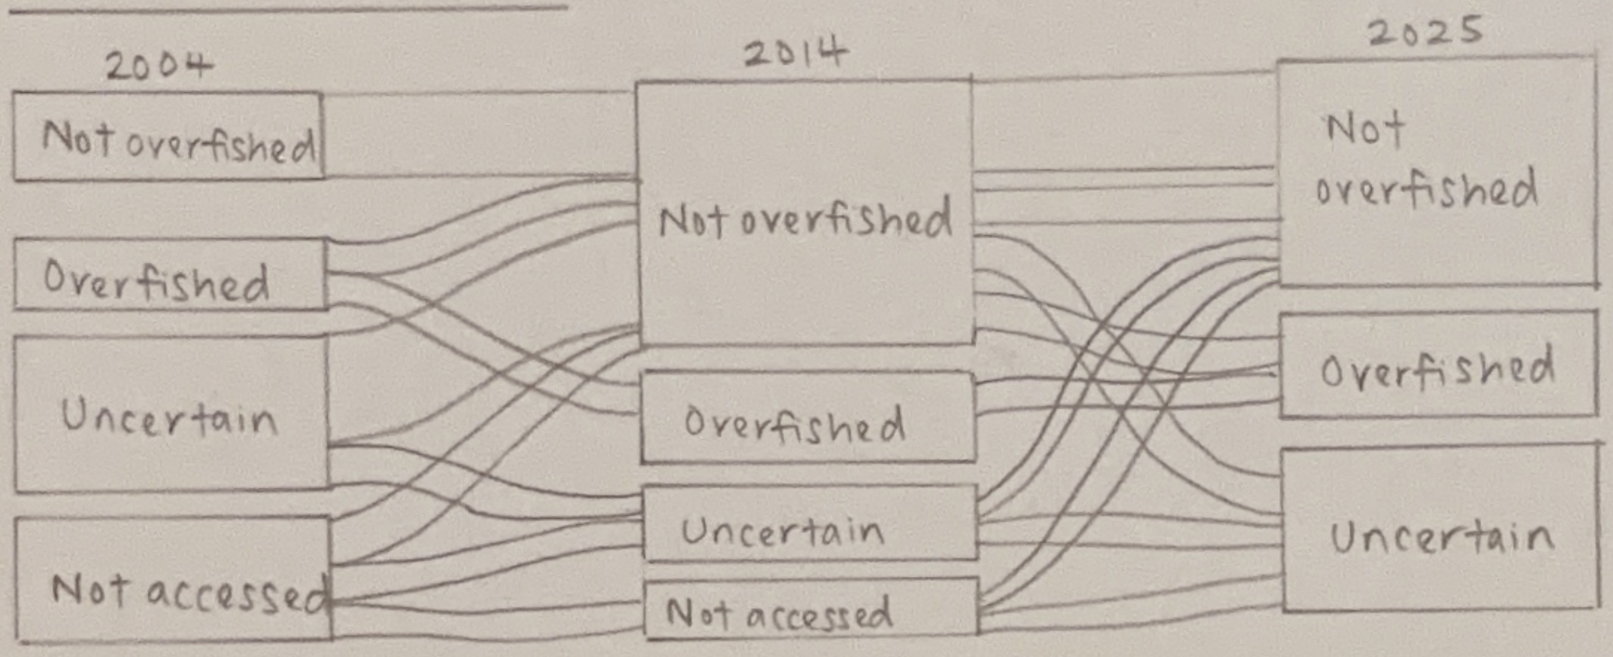
(Pareto chart)



From catch to Condition

Fish Stocks followed very different paths

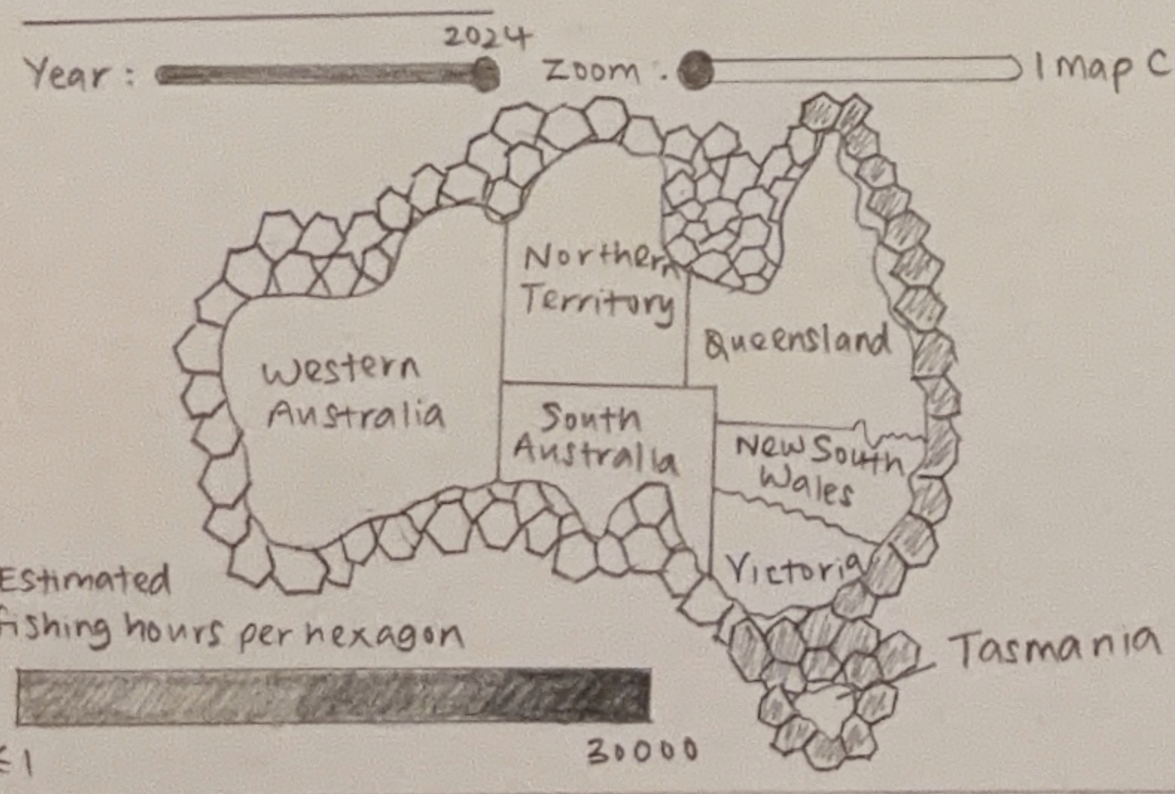
(Alluvial diagram)



From Condition to activity

Where tracked vessels spent time fishing

(Hexagonal bin map)



A changing fisheries economy
